Project Detail:

The Royal Liverpool and Broadgreen University Hospital began the development on their state-of-the-art hospital in 2004.

The construction is part of the NHS ProCure21 initiative, arrived to improve the performance of the public sector. The ProCure21 initiative aims to achieve cost and time certainty, high quality in design, continuous improvement as well as improving efficiency by working together.

Norwest Holst was awarded the £60million contract. The development included a Diagnostic and Treatment Centre (DTC) and a Cardio-Thoracic Centre (CTC).

The DTC will house an innovative barn style theatre this is the first of its kind in the UK. The open theatre area will allow surgeons to work as a team and will improve supervision. The innovative idea is expected to be replicated in many hospitals across the UK.

The development also included General Surgery, Orthopaedics, Day Wards and Pre Operation Assessments. All of these new facilities will be open to patients in late 2009.

Extranet Details:

Norwest Holst use 4Projects® to aid project management on all of their construction projects across the UK.

Norwest Holst used the system to manage project information and communications. They utilised the task module to communicate amongst team members to manage technical queries and RFI's. Norwest Holst also used the issuing of documents and drawings extensively and they saw a huge saving in time saved with packages being issued immediately.
